AUTOMATIC INSTALLER

These are the automatic installer instructions. If you cannot get the installer to work, I suggest you install by using the 'Manual Instructions' file in the 'Install' directory.

1. Upload the contents of the 'Upload' directory to your public_html folder on your web host.
2. Make sure you have SourceGuardian installed before proceeding; you can find help on installing it by looking at step 7 in the 'Manual Installation' file.
3. CHMOD the 'lib' directory and all contents inside it to 777.
4. Go to http://yourdomain.com/install/index.php.
5. Create a new database and user, grant the user rights.
6. Go back to your installation and fill in all the information you made in step 5.
7. You also will need your license, go to your control panel on PTCPay, and select view license. This license maybe reissued every time you need to install somewhere else.
8. Once you have finished installing, import the file "ip2country.sql.gz" in the install directory to your database, the same one you used for the installer.
9. go to http://yourdomain.com/. Your license will now be locked to your domain. You should receive an email with a key file to upload to your website. Upload the 'key.php' file to your root directory and 'lib' directory. You may re-download this file at anytime from your PTCPay control panel.
10. Go to http://yourdomain.com/admin and edit all the settings to fit your needs.
11. If you need more directions or if this method does not work, read the "Manual Install" file.

If you need help, visit PTCPay.Com/forum or contact support@ptcpay.com.
