GeN4 Installation Guide

What you need installed on your server:

- You will need PHP 5.2 or Higher:

GeN4 is always going to support the latest versions of PHP, so

you should, if you haven't already, begin to upgrade to the latest

PHP version as soon as it's released.

- cURL:

There's no version series for the "CURL" add-on, but

cURL is mainly designed for site communication. If you expect

your PayPal AutoPay scripts to work, cURL is required.

- MySQL:

Please consider using the 5.x MySQL versions (not

persistent).

-**SourceGuardian**

You can set this up in the directions below. Look at Step 7. You will need the loaders for SourceGuardian 8. You DO NOT need to purchase SourceGuardian and the loaders are free.

Directions:

1) Upload the contents of the 'Upload' directory to your root directory. **MAKE SURE TO UPLOAD ALL FILES IN BINARY MODE!**

3) Give the files 'lib/lib_database.php', 'lib/lib.php' and 'configuration.php' 777 rights. This can be done by using your FTP program.

3) Create your MySQL Database and User using your host control panel.

4) Grant full access between your MySQL User and Database.

5) Import the files 'Information/Installation/database.sql' and 'Information/Installation/ip2country.sql.gz' into your database.

6) Edit your 'lib/lib_database.php' file and insert the details you made in step 3.

7) Edit 'lib/license.php' and insert your license into the license field. You can find the license by logging in at http://www.ptcpay.com/store/customers/index.php?task=login.

8) Make sure your SourceGuardian 8.0+ loaders are installed correctly. Ask your host to setup/enable this for you, they will do so in most cases. Follow the instructions inside the SourceGuardian file included in the 'Information/Installation' folder if you need help on doing it yourself.

9) Open the file called 'Cron Jobs.pdf' and follow the instructions provided to setup your cron jobs.

10) Visit your site. Your license will now be saved and a key created. Visit http://www.ptcpay.com/store/customers/index.php?task=login, view license, and download your key. You should also receive an email with your key.php file.

11) Upload this 'key.php' file to your script root directory, lib directory, and admin directory. Any directory the script requires running needs this in it. If you'd like to make sure you'll have no issues, upload it to every directory.

12) Go to 'http://yourdomain.com/admin' and login using username *admin* and password *Dopy1234*.

13) Delete the 'Install' folder and all files under it.

14) Change your admin password and site settings.

15) Delete the 'Install' directory and all files under it.

16) **If you decide to enable Secure Admin in your admin panel, You must follow the directions called Secure_admin_instructions.txt, They are included in the 'Information/Installation' directory (same as these instructions).**

17) After that, you should be done!

If you need more help, visit http://PTCPay.Com/forum. If you would like to purchase add-ons or installation, contact support@ptcpay.com.
