Roulette Bot Pro Version 3

Before Doing Anything Read This Complete Document!

I cannot stress enough how important it is to watch all the videos and read the FAQ page. They contain information that if not followed may cost you to lose a lot of money.
Watch all the instructional videos at: http://www.roulettebotpro.com/setup.html.
These videos cover the installation, configuration, and how to use Roulette Bot Pro.
Read the Frequently Asked Questions page at: http://www.roulettebotpro.com/faq.html
Do not email any questions unless you have watched the videos and read the FAQ page. Many of your questions will be answered in the instructional videos.

Spin Data

In the zip file you downloaded there are 2 files called *"10 Million Spin Detailed Stats"* and *"10 Million Spin Summary Stats"*. I used a program call Roulette Xtreme to simulate 10 million roulette spins on a single zero roulette table and put the data into 2 different files. The files are self explanatory and for informational purposes only. You can use the data to help create your own system.

Running The Program

When you install and run the program you must be logged in with an administrator account or an account with administrator privileges. If you do not the program will not start and you may get an error while trying to configure a casino. If you get an error try this: For Windows 7 and Windows Vista right click the Roulette Bot Pro icon as select "run as administrator." For Windows XP right click the Roulette Bot Pro icon and select "run as..." and then select an account with administrator privileges.

You must have your computer color settings set to 32 bit while configuring any casinos and while running the program for it to work properly, otherwise you may get errors. It may run but it will not capture the numbers correctly and will cause you to lose money.

If you exit the casino roulette table before stopping Roulette Bot Pro it will freeze up or give you an "Invalid Parameter" error. If it does this you can use the task manager to close the program. So always stop Roulette Bot Pro before closing the roulette table.

Before you update to any new version you must delete any casino profiles you previously configured. After you update Roulette Bot Pro you must configure them again. You do not need to remake the betting profiles.

While playing at **Bet Voyager** casino you must use the **downloaded version**, the web version will not work. Please make sure that the casino window, especially the number display area is not covered by any other programs you have running.

While playing at **Smartlive Casino** if you are having problems with the program capturing numbers try using IE 8 or Firefox web browsers. To prevent Smartlive Casino from timing out if no bets have been placed, when you first select Smartlive Casino a window will pop up for you to enter the amount of minutes to wait before placing the timeout bet. The default is 20 minutes, I found this to be a good number.

Use The Preloaded Betting Profiles At Your Own Risk!

I do not guarantee that you will make any money using the preloaded betting profiles! *The preloaded betting profiles were made using a Playtech RNG casino with the following chip values: $.1, $.5, $1, $5, $10, $25, $100, and a table limit of $10.* The profiles may not work at the casino you are playing at if they have different chip values or table limits. If this is the case adjust your betting unit, stop loss, trailing stop, and profit targets accordingly. Please test the profiles in a play money account, or a real money account using the test mode first before placing any real money bets. You can change the settings if you wish or create your own settings. One strategy you can try is to just use a trailing stop instead of a stop loss with no profit target and let the program run until it hits your trailing stop. **ALWAYS** use a stop loss or trailing stop to prevent losing your entire bankroll.

Note About The Profiles: When you purchase Roulette Bot Pro it only comes with 2 profiles; Matt's Choice and Video. If want all the profiles right away you can purchase them by sending $20 US via paypal to mreams@shaw.ca. This is a non refundable purchase. Use the contact link on the website once you have purchased to let me know where to send them to. Otherwise after you have had the program for 60 days email me with your clickbank receipt and I will send you the rest of the profiles. If you paid by the monthly payment option you received a readme file telling you how to get a new betting profile every month.

The preloaded profiles are:
Profile Name: Profile Description **Risk Level** **Minimum Betting Unit Value**

Sleeper Profiles:
DCEC Insane: dozens, columns, even chances at **High Risk** **$.1**
DCEC Medium: dozens, columns, even chances at **Medium Risk** **$1**
DCEC Safe: dozens, columns, even chances at **Low Risk** **$1**

Reverse Sleeper Profiles:
Reverse Insane: all categories at **High Risk** **$1**
Reverse Medium: all categories at **Medium Risk** **$1**
Reverse Safe: all categories at **Low Risk** **$1**
Streets Insane: streets at **High Risk** **$.1**

Sleeper And Reverse Sleeper Profiles:
All Bets: all categories at **Medium Risk** **$1**
Matt's Choice: (Sleepers - dozens, columns, even chances) (Reverse Sleepers - all categories) at **Medium Risk** **$1**
Video: (*Exact settings used in the video)* all categories at **High Risk** **$1**
Video Safer: all categories at **High Risk** **$1**

Super Singles:
Super Singles: Matt's proprietary settings at **High Risk** **$.1**

I suggest a minimum balance of $100 for all profiles, but recommended a balance of $250.

Roulette Bot Pro Program History

Jan 27th – 2009 – Version 1 released

Aug 22nd – 2009 – Version 2 released

Bug Fixes:

- No longer freezing after a winning bet.
- The 0,1,2,3 bet is now calculated as a corner bet and not a street bet.

Features Added:

- The following casino platforms; Bet Voyager, Sports.com, Dublin Bet Live Casino, and Smart Live Casino.
- Individual betting unit overrides.
- Variable automated betting speed.
- Reset and restart when loss is at $X.
- Manual progressions.
- Recover amount lost over X amount of bets, for reverse sleepers only.
- 2 betting systems; reverse sleeper and super singles.
- Simplified Playtech casino configuration.

Oct 21st – 2009 – Version 2.1 released

Bug Fixes:

- Playtech automatic and semi-automatic modes fixed after Playtech updated their software.
- Improved number capturing for Bet Voyager implemented.
- Added an automatic 6 line bet for Smartlive Casino to prevent timing out. User can choose amount of time between these bets.

Sept 27th – 2010 – Version 3.0 released

Bug Fixes:

- Playtech automatic and semi-automatic modes fixed after Playtech updated their software.
- Removed Sports.com since they have totally changed their casino platform.
- "0" is no longer counted for outside bets as part of the sleeper or reverse sleeper count at any casino.
- Super Sleepers (Tracking Rules - Repeaters) will only trigger if a number has actually repeated. Before if repeaters was selected and a number had not repeated it would select a random number.

Features Added:

- The following casino platforms: Playtech Live, Micro Gaming, RealTime Gaming, Vegas Technology, 888.com 3 D Roulette, and Dealplaywin.com.
- Save spin sessions to a text file to load later to test betting systems.
- Auto load each casinos minimum chips values for all betting categories.
- Reset and restart when target hit.
- Stop at master target.
- Custom progressions - Progressions continue as far as user has programmed even if the current progression bet is in a positive or negative balance.
- 1 betting system: Complex Math Proportional Probabilities.
- Cancel creating a new casino configuration.
- Update feature - Runs automatically every time the program starts and checks for updates.
